ABSTRACT

In December 2001, the Education Trust released preliminary findings from its new database, "Dispelling the Myth Online," in a report titled "Dispelling the Myth Revisited (DTMR)." This followup report is the first of several multilayered looks at high-performing schools in the database. It contains additional information about DTMR schools. The lists (in tabular form) in this report answer these questions: (1) which of the DTMR schools had high test scores for at least two grade levels; (2) which schools of the DTMR report had high test scores in both reading/language arts and mathematics; and (3) which schools from the DTMR met both of the above criteria. The first list, "Multiple Grades: Math and/or Reading," contains 1,642 schools. The second list, "Multiple Subjects: Math and Reading," contains 1,969 schools with high scores in both subject areas, and the third list, "Meet Both of the Above Criteria," contains 1,187 schools. Some technical notes explain the ways in which these lists were compiled. (SLD)

Dispelling the Myth Revisited: Additional Tables

Dispelling the Myth Revisited: Additional Tables

In December 2001, the Education Trust released preliminary findings from its new database, *Dispelling the Myth Online*, in a report entitled *Dispelling the Myth Revisited* (DTMR). This follow-up report is the first of several multi-layered looks at high-performing schools in our database. In it, we provide additional information about DTMR schools.

The lists included herein answer the following questions:

1. Which of the schools from the *Dispelling the Myth Revisited* report had high test scores (i.e., among the top third) in at least two grade-levels?
2. Which of the schools from the *Dispelling the Myth Revisited* report had high test scores (i.e., among the top third) in both math and reading/language arts (either at the same grade level, different grade levels, or across multiple grade levels)?
3. Which of the schools from the *Dispelling the Myth Revisited* report met BOTH of the above criteria?

Why are we providing additional lists?

As we said in the December report, no single definition of high performance—or of high-poverty or high-minority, for that matter—will work for all research purposes. Accordingly, we created the online tool so users could construct and apply different definitions for different purposes.

At the same time, certain questions naturally flowed from the definition used in the first analysis—including, for example, how many of the original schools were high performing in both reading and math or at more than one grade level. We wanted to provide this second layer of data in an effort to be helpful to other researchers and organizations who want to study high performing schools.

Can we just agree on one definition of success and stick with it?

Most schools are neither monolithically "good" nor monolithically "bad." Rather, there's much to be learned from schools in all stages of improvement.

For example, DTMR included schools that were high scoring in only one subject in one grade level. We know from our own work in schools

across the country that the reforms that take hold in one subject and one grade level can provide the basis for improvements in other grades and subject areas. Mt. Royal, in Baltimore, for example, is a school in which the seeds of reform took hold in one 5th grade math class. Mt. Royal—99% African American and 73% low-income—has been among the top performers in math among ALL schools in Maryland for three years in a row. Out of the success in one grade and one subject, reform and curricular change have begun to seep into other subject areas of the school. Mt. Royal now qualifies in math and reading at the 5th grade level, although not yet in the 3rd or 8th grade.

On the other end of the spectrum, there was a set of schools that were not included in DTMR, but that could undoubtedly teach us a lot about success. For example, because we looked only at high performance in math and reading, we did not pull up schools such as Dunbar-Erwin School in Newport News, VA, which has been high performing in 8th grade science for 3 years in a row.

Because something can be learned from schools of many sorts, we created the *Dispelling the Myth Online* searchable web tool on our Web site (www.edtrust.org) and have encouraged its broad and creative use.

Will the Education Trust be producing more lists?

Over the next year, we are going to be regularly updating our database with new achievement data and information. For many states, those updates will include school-level achievement data by race.

We will also continually mine the data to find more high performing schools and to learn more about the schools we identify. Soon, we will be reporting schools that are sustaining high performance. As we go, we will be sharing what we learn.

What users should know about these additional lists.

Following are three subsets of data from *Dispelling the Myth Revisited*. Schools on these lists are not necessarily better than other schools in DTMR. These are simply different ways to look at the data provided in the original report.

It's important to note that by asking these new questions, we immediately reduced the possible universe of schools from DTMR.

- For example, finding schools with high performance in more than one grade level automatically eliminated virtually all of the schools in states that test in only one grade level per traditional grade span—elementary, middle school, high school. (See "Technical Notes" for more details and a full list of states affected.)

- Similarly, all of the schools in states that, like West Virginia, only have a "total" score in the database, had to be excluded because we could not verify high performance in both reading and mathematics, since their scores are not broken out by subject area.

Nevertheless, those who wish to look at high performance in these ways will be delighted, we suspect, to find that there are still many schools across the country that fit these criteria. For example:

- 1,642 schools had high performance (i.e., scores among the top third in their states) in at least two grade-levels;
- 1,969 schools had high performance (i.e., scores among the top third in their states) in both math and reading/language arts (either at the same grade level, different grade levels, or across multiple grade levels); and
- 1,187 schools met BOTH of the above criteria.

What these lists are:

Multiple Grades: Math and/or Reading (1,642 schools)

Which of the schools from the Dispel ling the Myth Revisited report were high performing (scored in the top-third of all schools in their states in math or reading) in more than one grade level? (1,642 schools)

These are the schools that had high test scores (i.e., among the top third in their states) in at least two grade-levels.

Multiple Subjects: Math and Reading (1,969 schools)

Which of the schools from the Dispel ling the Myth Revisited report were high performing in BOTH math and reading (either at the same grade level, or across multiple grade levels)?

These are the schools that had high test scores (i.e., among the top third) in both math and reading/language arts.

Meet Both of the Above Criteria (1,187 schools)

Which of the schools from the Dispel ling the Myth Revisited report met BOTH of the above criteria?

These are the schools that met the criteria for both of the two previous lists. In other words, they had high test scores (i.e., among top third in their states) in at least two grade-levels, AND they had high test scores in both math and reading/language arts. Note that a school need not have had high scores in math in two grade levels and reading in two grade levels to have made this list. For example, Pemberton Elementary in Maryland, had high test scores in 3rd grade math and reading and also in 5th grade math, thus meeting both the "at least two grade-levels" criterion and the "both math and reading" criterion.

How are you using this data in your own work?

We greatly appreciate all the feedback we receive from many of you out there who are committed to equity and a sound education for low-income and minority students.

We'd like to hear more from you about how you're using this data in your own work, and what you're learning about high performing schools. We're interested in your work with both the schools in the Dispel ling the Myth Revisited report and also the Dispel ling the Myth Interactive Database on our Web site. For example, we're interested in knowing:

- Do you use both the DTMR report and DTM Online?
- How have you used the database? What are you finding?
- How can we improve the interactive database as we develop our second version of DTM Online?

The more lessons we can share, the sooner we will achieve our goal to make sure every child meets high academic standards.

Technical Notes:

STATES WHERE TECHNICAL REASONS PREVENTED A SIGNIFICANT NUMBER OF SCHOOLS FROM BEING CONSIDERED FOR ONE OR MORE OF THESE LISTS:

As noted earlier, most or all schools in some states may have been excluded from consideration for one or all of these additional lists because of the following technical reasons.

1. Due to a lack of assessment and/or demographic data, we were not able to consider schools in a handful of states for the original DTMR lists released in December. **Iowa** does not have a statewide testing program. **New Mexico** and **North Dakota** could not provide school-level test scores for the database. Only fourth grade scores in **Washington** State could be analyzed for the list of high-performing, high-poverty schools because the state did not report free- and reduced-price lunch data for its schools in 2000, and estimates were available only for elementary schools at the time we conducted the analysis.

2. For the new multiple-grade-level list, schools had to have high test scores in at least two grade-levels. Therefore, many schools in DTMR could not be considered because their states only test once during elementary, middle, or high school. For example, the database includes only 4th and 8th grade scores for New York state, so elementary and middle schools in New York with traditional grade spans could not be considered for the list. Following are the states where such assessment patterns prevented us from considering schools with traditional grade spans for this list:

Arkansas	Nevada	South Dakota
Hawaii	New Jersey*	Utah*
Maine*	New York*	Vermont*
Massachusetts*	Oklahoma*	Wisconsin*
Michigan*	Pennsylvania*	Wyoming
Montana*	Rhode Island	

* Indicates the state has one or more schools with non-traditional grade spans (e.g. K-8 or 7-12) on the list.

3. For the new multiple-subject-area list, schools had to have high test scores in both math and reading or language arts to be included. Therefore, we were not able to consider schools in **South Dakota** and **West Virginia** for this list because the database included only "total" test scores (e.g., not broken out by specific subjects) for schools in those states. In addition, traditional elementary schools in **Colorado** could not be considered for the list because the database does not include mathematics scores below 8th grade for that state.
4. Any school that could not be considered for either the multiple-grade-level or multiple-subject-area list, as described above, could not be considered for the additional "combined" list.

DISPELLING THE MYTH REVISITED: ADDITIONAL TABLES

Top Third Achievement (Statewide) - Multiple Grade Levels

The list below is a subset of schools from DTMR (December, 2001). The schools on this list had high performance (i.e., test scores among the top third in their states) in at least two grade-levels. Because they are a subset of the schools identified in DTMR, the schools on this list meet the same performance and demographic criteria as described in that report. Similarly, this subset includes only schools that were high performing in the subject areas analyzed for DTMR (math and reading). Readers who wish to search for schools that are high performing in multiple grade levels or subjects according to different achievement or demographic criteria may use our interactive tool, DTM-Online, as may readers who wish to search for high-performing schools in science, social studies, or writing.

PLEASE NOTE: A number of schools in DTMR could not be considered for this list. Schools had to have high test scores in at least two grade-levels to be included. Therefore, many schools in DTMR could not be considered here because their states only test once during elementary, middle, or high school. For example, the database includes only 4th and 8th grade scores for New York state, so most elementary and middle schools there could not be considered. (See page 4 for a full list of such states.)

DEFINITIONS:

"High performing": One or more test scores among the top third of all schools in a state that took a particular test at the same grade level. Looks at all of the test scores generated by each state's testing program in the area of mathematics (M); reading (R); or language arts (L), when reading wasn't available in that state*. "Total" (T) is denoted where only composite scores were available.

"High poverty": The school's percentage of students who qualify for the federal free or reduced-price lunch program is at least 50% AND ranks in the top third for poverty enrollment among schools in the state at the same grade-level.

"High minority": The school's percentage of African-American and Latino students is at least 50% AND ranks in the top third for African-American and Latino enrollment among schools in the state at the same grade-level.

*except in Indiana, where both reading and language arts were considered

WV

Demographic Qualifier: "P" means school qualified based on percentage of low-income students. "R" means school qualified based on percentage of African American and Latino students. "PR" means school qualified based on both percentage of low-income and African American and Latino students. Please refer to the original DTHR report (December, 2001) for full context and demographic information for each school (report available at: www.edtrust.org).

DISPELLING THE MYTH REVISED: ADDITIONAL TABLES

Top Third Achievement (Statewide) - Multiple Subjects

The list below is a subset of schools from DTHR (December, 2001). The schools on this list had high performance (i.e., test scores among the top third in their states) in both math and reading/language arts (either at the same grade level, different grade levels, or across multiple grade levels)

Because they are a subset of the schools identified in DTHR, the schools on this list meet the same performance and demographic criteria as described in that report. Similarly, this subset includes only schools that were high-performing in the subject areas analyzed for DTHR (math and reading). Readers who wish to search for schools that are high-performing in multiple grade levels or subjects according to different achievement or demographic criteria may use our interactive tool, DTM-Online, as may readers who wish to search for high-performing schools in science, social studies, or writing.

PLEASE NOTE: A number of schools in DTHR could not be considered for this list. Schools had to have high test scores in both math and reading/language arts to be included here. Therefore, schools in states that have only "total" test scores in the database (e.g., not broken out by specific subjects) could not be considered for this list. For example, the database includes only "total" scores for West Virginia, so no schools in that state could be considered for this list. (See page 4 for a full list of such states.)

DEFINITIONS:

"High performing": One or more test scores among the top third of all schools in a state that took a particular test at the same grade level. Looks at all of the test scores generated by each state's testing program in the area of mathematics (M); reading (R); or language arts, when reading wasn't available in that state (L)*. "Total" (T) is denoted where only composite scores were available.

"High poverty": The school's percentage of students who qualify for the federal free or reduced-price lunch program is at least 50% AND ranks in the top third for poverty enrollment among schools in the state at the same grade-level.

"High minority": The school's percentage of African-American and Latino students is at least 50% AND ranks in the top third for African-American and Latino enrollment among schools in the state at the same grade-level.

*except in Indiana, where both reading and language arts were considered

DISPELLING THE MYTH REVISITED: ADDITIONAL TABLES

Top Third Achievement (Statewide) - Multiple Grades and Multiple Subjects

The list below is a subset of schools from DTMR (December, 2001). The schools on this list met all the criteria for the two previous subsets.

These are the schools that met the criteria for both of the two previous lists. In other words, they had high performance (i.e., test scores among top third in their states) in at least two grade-levels, AND they had high test scores in both math and reading/language arts. Note that a school need not have high scores in math in two grade levels to have made this list. For example, Pemberton Elementary in Maryland had high test scores in 3rd grade math and reading and also in 5th grade math, thus meeting both the "at least two grade levels" criterion and the "both math and reading" criterion.

PLEASE NOTE: A number of schools in DTMR could not be considered for this list. First, schools had to have had high test scores in at least two grade-levels to be listed here. Therefore, many schools in DTMR could not be considered for this list because their states only test once during elementary, middle, or high school. For example, the database includes only 4th and 8th grade scores for New York state, so most elementary and middle schools there could not be considered for this list. Second, schools had to have high test scores in both math and reading/language arts to be included here. Therefore, schools in states that have only "total" test scores in the database (e.g., not broken out by specific subjects) could not be considered for this list. For example, the database includes only "total" scores for West Virginia, so no schools in that state could be considered for this list. (See page 4 for a full list of such states.)

DEFINITIONS:

"High performing": One or more test scores among the top third of all schools in a state that took a particular test at the same grade level. Looks at all of the test scores generated by each state's testing program in the area of mathematics (M), reading (R), or language arts, when reading wasn't available in that state (L). * "Total" (T) is denoted where only composite scores were available.

"High poverty": The school's percentage of students who qualify for the federal free or reduced-price lunch program is at least 50% AND ranks in the top third for poverty enrollment among schools in the state at the same grade-level.

"High minority": The school's percentage of African American and Latino students is at least 50% AND ranks in the top third for African American and Latino enrollment among schools in the state at the same grade-level.

*except in Indiana, where both reading and language arts were considered
